

KAPOOR ET AL.  
Cellular Telephone And Multimedia  
Accessory Audio System ..."  
Atty. Docket No. 11343

Appl. No. 09/933,321  
Confirm. No.7056  
Examiner S. Aminzay  
Art Unit 2684

### **Reconsideration Request, Claims Pending**

The non-final Office action mailed on 13 February 2006 has been considered carefully. Reconsideration of the claimed invention in view of the amendments above and the discussion below is respectfully requested.

Claims 1-7 and 16-20 are allowed or allowable.

Claims 1-20 are pending.

### **Allowability of Claims Over Sadler & Neaves**

#### **Rejection Summary**

Claims 8-10, 12 and 14-15 stand rejected under 35 USC 103(a) as being unpatentable over U.S. Patent No. 6,058,319 (Sadler) in view of U.S. Publication No. 2004/0204042 (Neaves).

The Examiner concedes that Sadler fails to disclose or suggest a "... player command ..." but asserts that it would have been obvious to "... have included Neave's audio command into Sadler's audiocassette player signal ...."

#### **Allowability of Claim 8**

Regarding independent Claim 8, the prior art fail to disclose or suggest an

... audiocassette adapter for coupling a mobile electronic device to an audiocassette player, comprising:  
a cassette head coupling device;

Art Unit 2684

a mobile electronic device input coupled to the cassette head coupling device;  
an audiocassette player command signal generator;  
a control signal output coupled to the audiocassette player command signal generator.

Contrary to the Examiner's assertion, Sadlre fails to disclose "an audiocassette player command signal generator" and a "control signal output coupled to the audiocassette player command signal generator." The passages of Sadlre referenced by the Examiner to support this assertion refer to a detection circuit (64) housed within a coupling unit (52) mated to a mobile phone (12). In Sadlre, the detection circuit (64) detects when a cassette adapter (70) is connected to the coupling unit (52). In Sadlre, when the cassette adapter is disconnected, the internal speaker (20) and microphone (22) of the mobile phone (12) are active. Sadlre col. 4: 18-20 & 57-60. When the cassette adapter is connected, the external microphone (90) is active and audio is sent from the phone to the cassette adapter (70). Sadlre, col. 5: 1-4.

Neither Sadler nor Neaves disclose or suggest an "...audiocassette player command signal generator..." or providing any other control signal at a "...control signal output..." of an audiocassette adapter for coupling a mobile electronic device to an audiocassette player. In Neaves, a controller (11) instructs a mobile phone (2) to receive an audio signal from an audio source (10) and to transmit the received audio signal over the telecommunications network. The controller of Neaves is not a "...audiocassette adapter..." or any other kind of adapter. Thus Neaves does not even disclose sending a control signal to a mobile phone over an adapter. The Examiner obviousness rejection appears to be based on hindsight reconstruction since there is no motivation in the prior art for the asserted combination. Claim 8 is thus patentably distinguished over Sadler and Neaves.

#### Allowability of Claim 9

Regarding Claim 9, the prior art fails to disclose or suggest in combination with the limitations of Claim 8,

... the audiocassette player command signal generator for outputting unique control signals in response to corresponding audiocassette player commands.

Sadler admittedly does not disclose providing audiocassette player commands at a control output of the audiocassette adapter. While the controller (11) of Neaves commands the mobile phone (2) to receive and transmit audio from a remote source, the controller in Neaves does not provide audiocassette player commands. Claim 9 is further patentably distinguished over Sadler and Neaves.

#### Allowability of Claim 10

Regarding Claim 10, the prior art fails to disclose or suggest in combination with the limitations of Claim 8,

... the audiocassette player command signal generator comprising a rotational transducer with a transducer output coupled to the control signal output of the audiocassette adapter.

Contrary to the Examiner's assertion, Neaves does not disclose a "rotational transducer". Para. [0017] of Neaves relates to an audio transducer, not a rotational transducer. Claim 10 is thus further patentably distinguished over Sadler and Neaves.

### Allowability of Claim 12

Regarding Claim 12, the prior art fail to disclose or suggest in combination with the limitations of Claim 6,

... the audiocassette player command signal generator comprising a cassette head actuatable switch with a switch output coupled to the control signal output of the audiocassette adapter.

The passages of Sadlre referenced by the Examiner to support this assertion refer to a detection circuit (64) housed within a coupling unit (52) mated to a mobile phone (12). As noted above, in Sadlre, the detection circuit (64) detects when a cassette adapter (70) is connected to the coupling unit (52). Claim 12 is thus further patentably distinguished over Sadler and Neaves.

### Allowability of Claim 14

Regarding Claim 14, prior fail to disclose or suggest in combination with the limitations of Claim 8,

... the audiocassette player command signal generator comprising an cassette head actuatable switch, the audiocassette player command signal generator comprising a rotational transducer;

a logic device having an output coupled to the control signal output;  
a switch output of the audiocassette player head actuatable switch coupled to an input of the logic device, a transducer output of the rotational transducer coupled to another input of the logic device.

As discussed neither Sadler nor Neaves disclose or suggest an "audiocassette player command signal generator", or a "rotational transducer"

among other limitations of Claim 14. Claim 14 is thus further patentably distinguished over the art.

#### Allowability of Claim 15

Regarding Claim 15, the prior art fails to disclose or suggest in combination with the limitations of Claim 14,

... the audiocassette player command signal generator for outputting unique control signals in response to corresponding audiocassette player commands.

Sadler and Neaves disclose or suggest an "audiocassette command signal generator" that outputs control signals responsive to corresponding audiocassette player commands. Claim 15 is further patentably distinguished over the art.

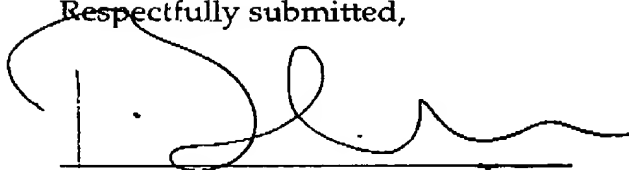

#### Prayer For Relief

In view of the discussion above, the Claims of the present application are in condition for allowance. Kindly withdraw any rejections and objections and allow this application to issue as a United States Patent without further delay.
